

NewStart UK Documentation Pack v1.2

Delivery Note

Structured foundation for product planning, vibe coding, stakeholder review, brand direction, compliance awareness, content operations, growth planning, and commercial execution.

Purpose of This Pack

This documentation pack has been prepared to give NewStart UK a strong foundation before development begins. It is designed to support product planning, vibe coding, stakeholder review, brand direction, compliance awareness, content operations, growth planning, and future commercial execution.

The pack positions NewStart UK as a UK newcomer settlement platform, starting with international students as the first MVP audience.

Final Assumptions Behind Pack v1.2

1. Product Positioning

NewStart UK is a UK newcomer settlement platform, starting with international students.

The long-term brand is broad, but MVP v1 remains student-focused to avoid overbuilding too early.

2. MVP Build Focus

MVP v1 should include:

- landing page
- authentication
- student onboarding profile
- personalised checklist
- progress tracker
- readiness score
- guidance library
- scam/mistake alerts
- basic admin dashboard
- basic email reminder logic
- Document Helper Lite as a controlled AI feature or placeholder

MVP v1 should **not** include:

- full native mobile app
- full partner dashboard
- full payments
- full document vault
- WhatsApp automation
- advanced AI admin copilot
- complex marketplace functionality

These can be added after validation.

3. Technology Direction

Recommended stack:

- Next.js
- Tailwind CSS
- shadcn/ui
- Supabase Auth + Postgres
- Vercel
- Resend for email
- OpenAI-compatible AI layer later
- PWA later
- native mobile app later

4. Brand/Persona Direction

The recommended guide persona is:

Nia - The NewStart Navigator

Nia should be clearly described as an AI-assisted guide, not a real adviser, founder, student, lawyer, doctor, immigration officer, or government representative.

5. Design Direction

The product design should feel like:

Modern civic-tech + friendly student support + calm fintech-style dashboard.

It should not feel too childish, too government-like, or too AI-gimmicky.

6. Compliance Boundary

NewStart UK provides	NewStart UK does not provide
----------------------	------------------------------

• general guidance • checklist support • document explanation • signposting • reminders • preparation help	• legal advice • immigration advice • financial advice • tax advice • medical advice • housing/legal representation
---	--

7. Data/Privacy Boundary

For MVP v1, the product should use a document checklist/vault-lite approach rather than storing sensitive documents.

Users may track documents or paste non-sensitive text for explanation, but the MVP should avoid storing passports, visas, BRPs, bank documents, tenancy contracts, or highly sensitive files until privacy and security controls are mature.

8. Geography Assumption

Initial content should focus on UK-wide general guidance, with England-first practical examples where necessary.

This is because student housing, GP processes, council tax, and local authority procedures can vary by UK nation and local area.

9. Packaging Format

The pack is structured to include:

- 28 Markdown files
- 28 individual PDFs
- 6 merged volume PDFs
- 1 complete master PDF
- prompt asset files
- build-ready assets
- 1 ZIP folder

This allows the pack to be useful for both human review and AI-assisted development.

10. Prompt Assets

The pack includes copy-ready prompts for:

- vibe coding
- design system generation
- UI screen generation
- Nia/avatar generation
- social media content
- short-form video scripts

- landing page copy
- lead magnets
- Document Helper Lite
- admin AI copilot
- compliance checker
- partner proposal
- B2B email sequence
- crisis response

Final Delivery View

Nothing major is missing at this documentation stage.

The two areas that should evolve after this pack are:

- Legal/compliance review before public launch
- Real-user validation with students, agents, universities, and potential partners

This pack is therefore suitable as the foundation for:

- MVP planning
- vibe coding
- brand development
- content creation
- stakeholder presentation
- pilot preparation
- partner discussions
- future investment or grant conversations

Conclusion

NewStart UK Documentation Pack v1.2 is ready to serve as the project's structured foundation for development, validation, and early commercial execution.

Prepared for NewStart UK project handover and development readiness.
